

## AFTER CARE

---

After Care Instructions following Lash Extensions Procedure:

- Do not get new extensions wet for the first 24 hours. You want the glue to be able to fully cure and set. Shower by having your back facing the water and not your face.
- Do not use any oil-based products, make-up, creams and NO mascara.
- Use only water-based make up and water-based make up remover.
- Wash your lashes every couple of days using a water-based cleanser. Use a small eye shadow brush to apply a small amount and work in circular motions. Rinse by splashing water on your face. Never splash water directly onto your lashes!
- Use a cotton swab to remove all make up around the eye
- Do not perm, tint or use an eyelash curler on your extensions. This can damage or cause lashes to fall out.
- Please do not pull on eyelash extensions
- Avoid rubbing your eyes
- Avoid sleeping on your sides and your face
- Please have a trained lash technician to have your extensions removed. Never pull out your extensions as this could cause your natural lash to pull out also.
- To maintain and keep your lashes full of life, please book a fill every 2-3 weeks!
